Anar Labs

Anar Agents

Agents that show each step.

Agents runs tool-calling AI agents on your model endpoint and records each step of each run.

For
Digital transformation leads

Date
November 2026

The problem

Multi-step work needs more than a chat answer.

01

Many steps

A citizen or staff request needs several steps and several lookups.

02

No trace

A chat answer does not show the steps behind it.

03

No safe place to try

Teams need to test an agent before it meets a citizen.

What it is

A loop that calls your model and runs tools.

01

A request

A user or a system sends a task to a published agent.

→

02

Anar Agents

Calls your model. Runs each tool the model asks for. Stops at the step limit.

→

03

Answer and trace

The answer, plus a record of each step and each tool call.

Agents run on the model endpoint you provide. Anar supplies no models.

The engine

Each run has a limit and a record.

Agent loop

Model calls and tool calls, with a step limit and a tool timeout. The default limit is 10 steps.

Shipped

Run or stream

Get the result at the end, or stream each step as it happens.

Shipped

Step traces

Run history, each step, each tool call and metrics for each agent.

Shipped

Traces do not record the tenant, the user or the cost yet.

Templates

Start from a template, not a blank page.

7

agent templates with 26 tools.

Count from the product source, November 2026.

Partial

- **Citizen services:** citizen inquiry and permit processing.
- **Staff work:** HR policy, document review and procurement.
- **Language work:** translation and meeting summary.
- The template tools return sample data. Connect your own systems before live use.

Before a pilot

Four limits to know before a pilot.

Storage

The agent list lives in memory. A restart loses the agents you created.

Partial

Custom agents

An agent you build has no tools yet. Only templates have tools.

Partial

Tool permissions

A permission list exists. The loop does not check it yet.

Partial

Run access

Any signed-in user can run any published agent.

Partial

Status today

What works now, and what does not yet.

Capability	Status	Note
Agent loop, streaming, step traces	Shipped	Step limit and tool timeout.
Seven templates	Partial	Tools return sample data.
Agent builder and storage	Partial	No tools on custom agents. A restart loses them.
Tool permissions, run access	Partial	Not checked at run time yet.
Tools for other Anar products	Partial	Coded. Not attached to any agent.
Guard filter, approvals, connectors	Roadmap	Planned. Not built.

Roadmap

The next steps connect agents to real systems.

Now

- Agent loop with step limits
- Run and stream modes
- Step traces and metrics

Next

Roadmap

- Arabic in every template
- Arabic operator console
- Anar Guard check before and after each run
- Connectors to your systems
- Answers grounded in tool results

Later

Roadmap

- Tool grants you can review
- Tool calls on behalf of the user
- Agent versions
- Human approval steps
- A test gate before publish

The platform

Agents use the Anar platform when you connect them.

Anar Gateway

Agents can send each model call through the gateway when you set its address.

Anar Guard

Agents can send their events to the Guard audit trail. Guard does not filter runs yet.

Run one process with us.

A one-month pilot: we deploy in your environment and run it with one team.
