Anar Labs

Anar Flow

Chain AI steps with checks.

Anar Flow runs a workflow of model calls, system calls and policy checks, and keeps a record of each step.

For
Process owners and digital teams

Date
November 2026

The problem

AI steps run in scripts that nobody reviews.

01

Scripts in many places

Each team writes its own script to call a model. Other teams cannot read it.

02

No policy check

A model answer goes to the next system with no policy check.

03

No record of each step

When a result is wrong, nobody can see which step made it.

What it is

A trigger starts a run. Flow runs each step.

01

Trigger

An API call or a webhook starts a run.

→

02

Anar Flow

Runs each step in order, with retries, branches and policy checks.

→

03

Run record

Flow stores the result of each step. Open a run to see what happened.

Anar supplies no models. Model steps use the endpoint you configure. Today a run completes inside one request.

Steps

A workflow is a list of typed steps.

9

step types. Each step can retry and can follow an error branch.

Count from the product source, November 2026.

- **Calls:** model call, API call
- **Logic:** condition, loop, parallel, transform
- **Governance:** Guard check, approval
- **Anar products:** service call

Shipped

Policy check

A policy check can stop a step.

The Guard check step sends content to Anar Guard. When Guard blocks the content, the run follows the branch you set.

Shipped. Set the Guard address and token.

Tested against a mock of Anar Guard.

Guard check step

block

The run stops this path and takes the branch for blocked content.

Building

Build, publish and reuse workflows.

Visual builder

Drag steps onto a canvas and save the workflow. Conditions use template variables.

Partial

Life cycle

Clone, publish, unpublish and archive workflows. See run statistics.

Shipped

Starter workflows

Three templates: citizen request, document review and permit approval.

Partial

Shipped Partial Roadmap

Limits

Four features work today, with limits.

Product calls

A step can call Guard, Docs, Chat, Voice, Present or Comply. Only mock tests cover these calls.

Partial

Human approval

Approval passes automatically by default. No inbox can resume a stopped run yet.

Partial

Webhook trigger

A webhook starts a run. The webhook has no sign-in check yet.

Partial

Roles

Only delete actions need the admin role. Other actions need a sign-in.

Partial

Shipped Partial Roadmap

Status today

What works now, and what does not yet.

Capability	Status	Note
Workflow engine, retries, branches	Shipped	Nine step types.
Guard check step	Shipped	Needs the Guard address and token.
Builder, templates, product calls	Partial	Product calls have mock tests only.
Human approval	Partial	Passes automatically by default. No resume.
Webhook trigger	Partial	No sign-in check on the webhook.
Schedules, durable runs, egress allow-list	Roadmap	Not built yet.

Roadmap

Safety and durable runs come first.

Now

- Workflow engine and builder
- Guard check step
- API and webhook triggers

Next

Roadmap

- Allow-list for outbound API calls
- Approval inbox, notification and resume
- Runs that survive a restart

Later

Roadmap

- Scheduled triggers
- Locked published versions
- Exportable case audit pack
- Arabic operator interface

The platform

Flow connects Anar products.

Anar Guard

A Guard check step gates content in any workflow. Set the Guard address and token.

Anar Gateway

Model steps can go through the gateway when you set its address.

Anar Docs

A Flow step can send a document to Docs for processing.

Automate one process with us.

A one-month pilot: we deploy in your environment and run it with one team.
