Anar Labs

Anar Insights

Ask your data a question.

Anar Insights turns a plain-language question into a query on your CSV file, and returns a table and a chart type.

For
Analytics and strategy teams

Date
November 2026

The problem

Simple questions wait for an analyst.

01

Questions wait in a queue

A manager asks a simple question. The answer waits for an analyst.

02

Reports take time

Someone must turn each table into a written report.

03

Few staff can query data

Staff who cannot write a query depend on the staff who can.

What it is

Ask in plain language. Get a table.

01

Your question

Type a question about a CSV file that an admin uploaded.

→

02

Anar Insights

Your model turns the question into a structured query. Insights runs the query on the data.

→

03

Your answer

A result table and a chart type: line, bar, pie, area or table.

Anar supplies no models. The model writes the query. Insights runs the query, so the model does not compute the table.

Asking

One CSV file, one question at a time.

Plain-language query

Ask a question and get a table and a chart type.

Shipped

CSV upload

Admins upload CSV files up to 10 MB and 50,000 rows.

Shipped

Arabic questions

Your model reads Arabic questions. Arabic digits, Hijri dates and Arabic column names are not handled yet.

Partial

No-model fallback

Without a model, a keyword parser handles simple sums, averages and counts.

Partial

Shipped Partial Roadmap

Reporting

Write reports and save dashboards.

Reports

Your model writes report sections and key findings from summary statistics. Check the figures in the text.

Report · Figures

Shipped · Partial · Roadmap

Dashboards

Save, clone, export and import dashboards with widgets. Widget data does not refresh.

Shipped

Query history

Search past questions and see how teams use the tool.

Shipped

Data handling

Know where your data goes today.

Item	Today	Fix
Uploaded rows	Insights keeps a copy in its own database and in memory.	Roadmap
Access to data	Every user can see every data source. The query log does not record the user.	Roadmap
Classification	Insights does not read data classification labels.	Roadmap
Live sources	Connector code exists. The product does not use it yet.	Partial

Use Insights with data that every user may see until per-user access is built.

Status today

What works now, and what does not yet.

Capability	Status	Note
Plain-language query on CSV	Shipped	One file at a time.
Reports, dashboards, history	Shipped	Widget data does not refresh.
Arabic questions	Partial	Depends on your model. Quality is not tested.
Report figures	Partial	The model writes them. No link to the source data yet.
Live data connectors	Partial	Code exists. Not connected to the product yet.
Real-time data, forecasts, per-user access	Roadmap	Not built yet.

Roadmap

Data controls come first.

Now

- Plain-language query on CSV
- Reports and dashboards
- Query history

Next Roadmap

- Per-user access and a query audit trail
- Classification labels at query time
- No copies of your data in the product
- Figures computed, with their source

Later Roadmap

- Arabic-native analytics
- Connectors to your data stores
- A shared semantic layer
- Bilingual report export

The platform

Insights works with the Anar platform.

Anar Gateway

Insights can send its model calls through the gateway when you set its address.

Anar Guard

Insights sends an event to Guard for each model call. Guard does not check queries yet.

Ask your own data, with us.

A one-month pilot: we deploy in your environment and run it with one team.
