Anar Labs

Yusr

Four obligations. One ledger.

يُسر

E-invoicing, VAT, Corporate Tax and WPS payroll in one Arabic-first console, with an audit trail under every change.

For
UAE businesses and their accountants

Date
November 2026

The problem

Four obligations, separate tools, and a spreadsheet in the middle.

Today

Accounting suite

Invoices, e-invoicing and VAT.

→

By hand

Spreadsheet

Staff copy totals between tools each month.

→

Today

Payroll tool

The WPS salary file, with no tax engine.

Accounting suites

Many now include e-invoicing and VAT. Payroll and the WPS file stay in another tool.

Payroll tools

They make the WPS file. They have no tax engine.

Arabic last

Most tools add Arabic as a translation. Few start from it.

Your team

Your staff copy figures between the tools by hand, every month.

We reviewed 15 UAE products in November 2026. None covers e-invoicing, VAT, Corporate Tax and WPS in one Arabic-first product.

Why now

E-invoicing becomes law in phases.

Date	Who	What happens
1 Jan 2027	Revenue of AED 50 million or more	E-invoicing goes live
31 Mar 2027	Revenue below AED 50 million, and government entities	Last date to appoint an accredited provider
1 Jul 2027	Revenue below AED 50 million	E-invoicing goes live
1 Oct 2027	Government entities	E-invoicing goes live
1 Jan 2029	Transactions inside a tax group	The 24-month exclusion ends

From go-live, a business that cannot issue or receive e-invoices can be fined AED 5,000, then AED 5,000 each month, up to AED 50,000 in 12 months.

Sources: Ministerial Decisions 243 and 244 of 2025, as amended by 197 and 66 of 2026, and Cabinet Decision 173 of 2026. Primary texts from the UAE Ministry of Finance, read 18 November 2026.

What Yusr does

One console for the four monthly obligations.

Area	Capability	Status	Note
E-invoicing	PINT-AE invoice files and Arabic PDF invoices	■ Shipped	
E-invoicing	Hand-off to an accredited provider	◩ Partial	Interface built. Live partner pending.
VAT	FTA audit file and VAT penalty estimate	■ Shipped	
VAT	VAT 201 return and EmaraTax draft	◩ Partial	The form is built. It does not yet read your invoices.
Corporate Tax	9% computation, small-business relief, free-zone flags	◩ Partial	The engine is complete. Input screens come next.
WPS payroll	Salary file, MOHRE checks, gratuity, pension	◩ Partial	Gratuity and pension are complete. The file is not yet tested with a bank.

One ledger

Built on real books, exact money and cited law.

01

Document

An invoice or a credit note, in AED or another currency.

→

02

Journal entry

Debits equal credits, in whole fils. A credit note posts a reversal.

→

03

Audit row

Chained to the row before it. A later edit shows.

Double-entry ledger

Every posting balances. The trial balance comes from the same ledger.

Exact money

Yusr stores amounts in whole fils. Rounding errors cannot build up.

Rules cite the law

Each rule names its legal instrument and start date, for example MR 340/2026. A change in the law updates data, not code.

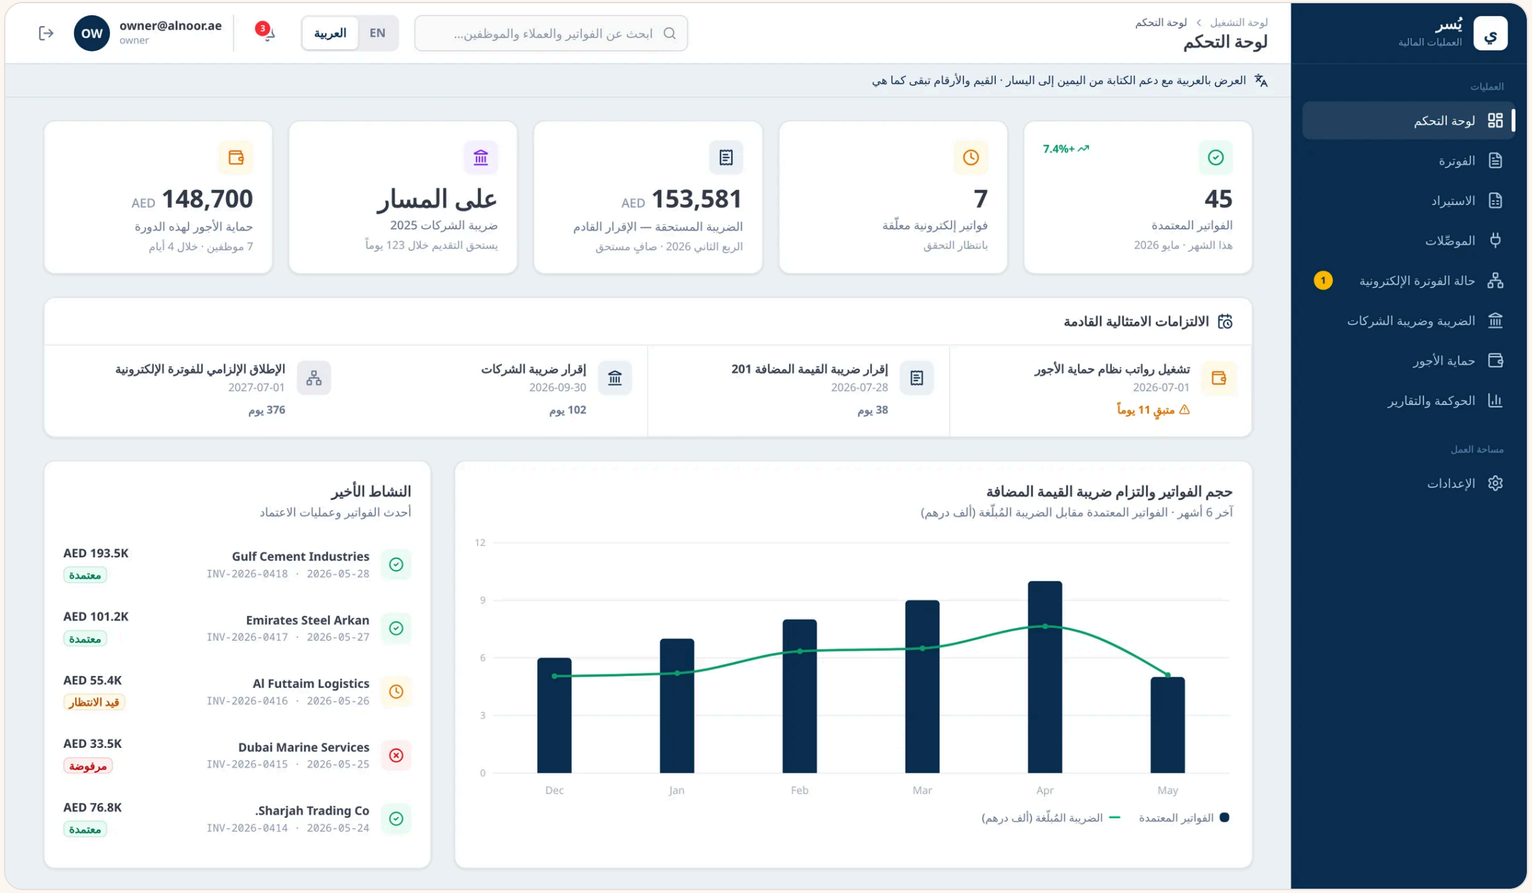

Arabic first

Arabic is the default.

Every screen works in Arabic and in English. A test fails the build if one language misses a label.

Invoices print in Arabic, right to left.

Shipped

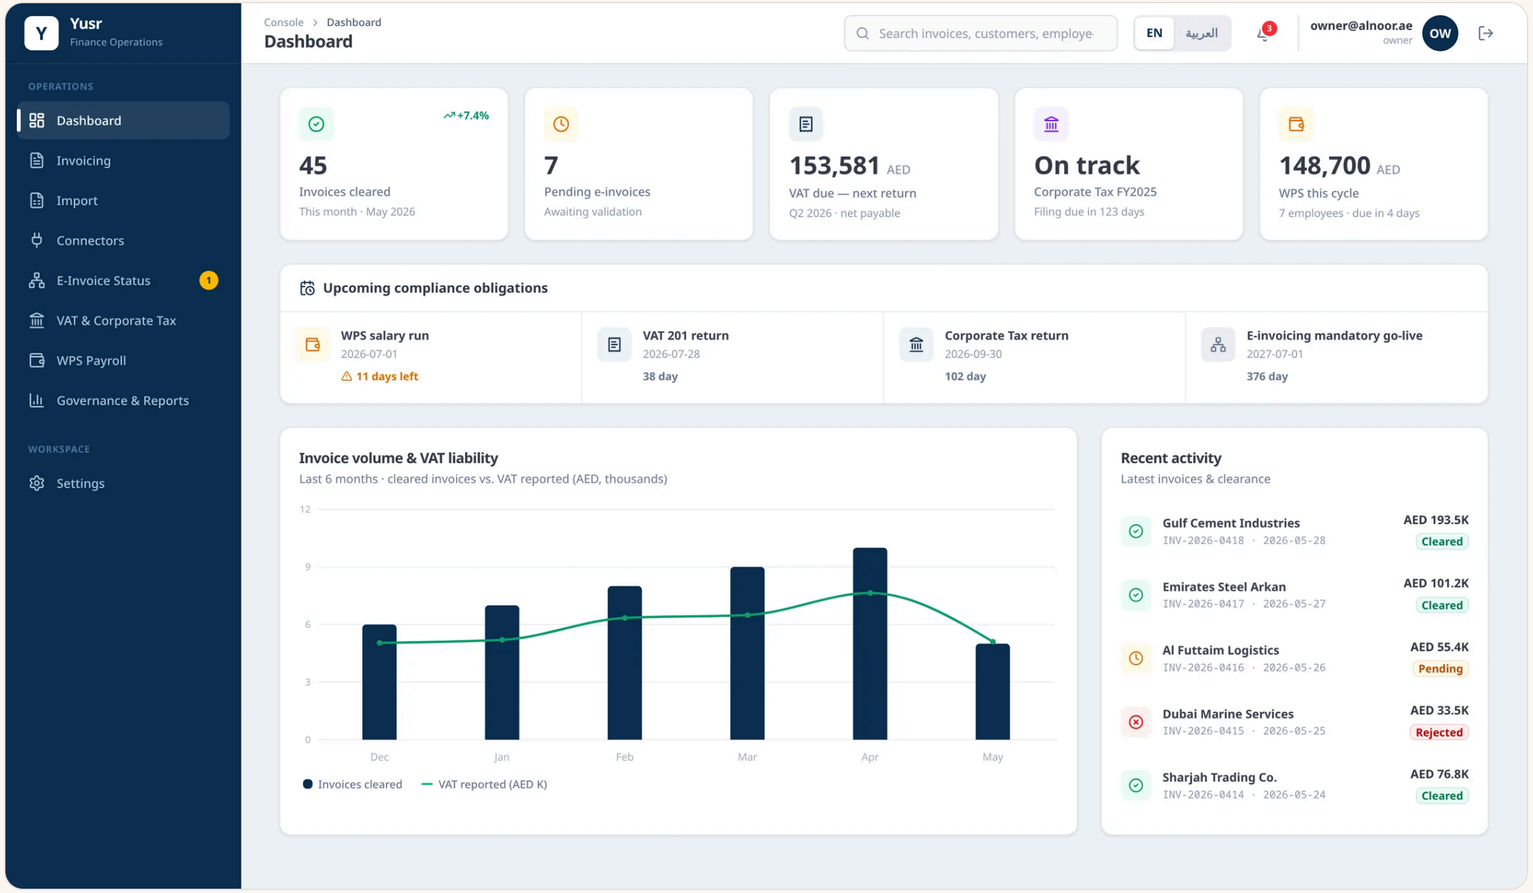

Yusr dashboard in Arabic. Demo company.

The console

The compliance month on one screen.

Invoices cleared, e-invoices waiting, VAT due, Corporate Tax status and the payroll cycle. The next deadlines sit underneath.

Shipped

Yusr dashboard. Demo company.

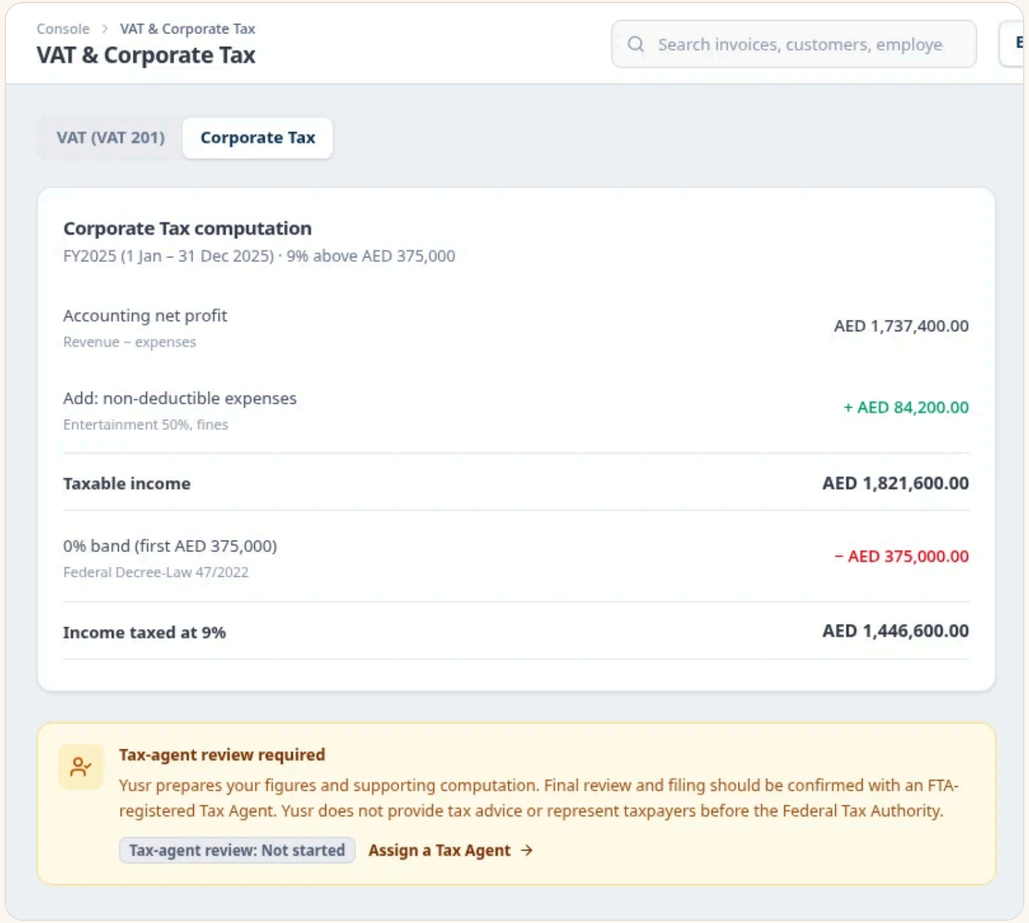

The tax-agent boundary

Software, not a tax agent.

Yusr computes and drafts. Only an FTA-registered tax agent can approve Corporate Tax for filing.

The software enforces this boundary. It is not only a line in the terms.

Shipped

Corporate Tax computation with the tax-agent review step. Demo company.

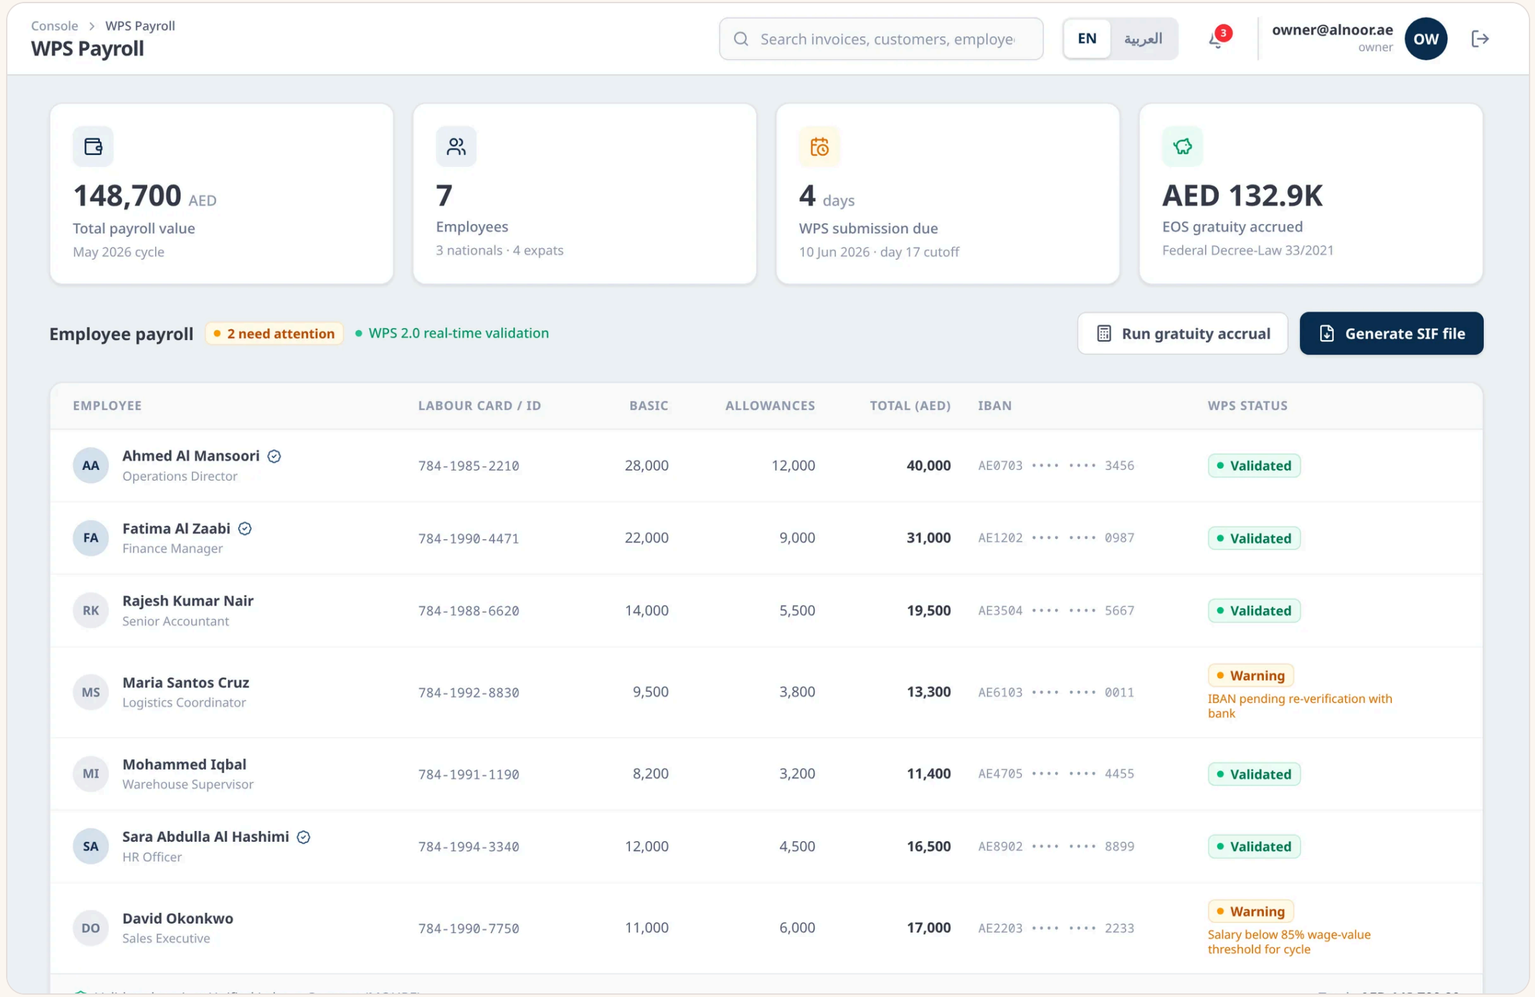

WPS payroll

Payroll files, checked before you send them.

Yusr checks each employee against the MOHRE rules, accrues gratuity and pension, and writes the salary file for your bank.

The money goes from your bank. It never passes through Yusr.

◩ **Partial. Bank file not yet tested with a bank.**

WPS payroll. Demo company.

Trust

Controls are in the database, not only in the screens.

Control	Status	What it does
Tenant isolation	Shipped	The database stops one customer from reading another customer's rows.
Audit log	Shipped	Each change is chained to the one before it. A later edit shows.
Sign-in and roles	Shipped	Four roles, access by branch and two-factor sign-in.
Data protection records	Shipped	Processing register, consent log and retention with legal holds.
Hosting in the UAE	Roadmap	You choose where your data lives. UAE hosting is not yet deployed.

Connections

Bring in the invoices you already have.

01

Your sources

CSV files, UBL invoices and credit notes, or your system through the API.

→

02

Review queue

Yusr checks each row. You fix or accept errors before anything posts.

→

03

Yusr

Accepted invoices join your invoice register.

Import

Upload CSV files or UBL invoices and credit notes. A review queue catches errors before they post.

Shipped

Public API

Your point-of-sale or ERP system pushes invoices by API, with documented endpoints and safe retries.

Shipped

Accounting connectors

Zoho Books, QuickBooks, Xero and Tally. Sign-in and the catalogue are built. Data sync is not.

Roadmap

Roadmap

What comes next, in order.

Now

- The four obligations on one ledger
- Arabic and English on every screen
- Audit log, roles and two-factor sign-in

Next

Roadmap

- VAT return computed from your invoices
- Customer and supplier records
- Inbox for e-invoices you receive
- Live link to an accredited provider

Later

Roadmap

- One console for accountants with many clients
- Hosting in the UAE
- Accounting connectors
- ISO 27001 certification

Be ready before 1 July 2027.

Start a one-month pilot with your finance team, on your own figures.
